

Data Protection Services

Premier Offsite Vault and Rotational Services for Computer Tapes & Magnetic Media

Confidently Protect Your Valuable Business Data

- Protect your organization's vital electronic information in state-of-the-art facility
- 5 Hour NFPA fire rating with FM200 suppression system.
- Temperature and humidity monitored and controlled.
- Bar coded inventory control system with on-line tracking and ordering capabilities.
- Natural gas back-up generator to power all systems during any outage

Qualified Personnel

Datastore's leadership team and service specialists bring years of experience and best practices to each Datastore customer engagement. All personnel undergo security background checks and drug-screening – and are trained on HIPAA, GLB, and SOX – to ensure security, integrity and service standards.

Physical Security

Datastore's "world-class" operations centers provide a clean and secure environment for the processing of your critical documents, files and other types of records. Our facilities and delivery fleet are equipped with sophisticated fire protection, security, climate control, and GPS tracking systems.

Does your company have a disaster recovery (DR) or business continuity plan? Is it something that has been discussed but not implemented? Of all the vital information an organization needs to manage, it is the electronic data that is the hardest to replace if not properly backed up and stored. By no means does an off-site data protection program constitute either of the aforementioned plans but it is an integral part of both.

Datastore is a state-of-the-art facility that offers its customers peace of mind and the comfort that their vital electronic data is safeguarded yet available whenever it is needed. Whether the middle of the night or a holiday, Datastore provides service 24/7/365 and offers multiple emergency delivery options.

Security is paramount at Datastore. From the moment you walk into our facility, you gain a sense of comfort that your data is well-placed and proper controls used to manage your vital information.

We have an experienced staff knowledgeable in all back up methods as well as being thoroughly background screened. Locked and insulated containers transported in temperature controlled, alarmed vehicles with GPS tracking provide safe passage from your company to Datastore. Whether your data is backed up on tape, disk, or removable drives or you desire the storage of "disaster kits", Datastore has the answer for your off-site data protection needs. If it is eVaulting you are interested in we have solutions to accommodate those needs as well.

DATASTORE

Modern Technology

Datastore employs advanced technology standards throughout our operation. From our capture software to production scanning equipment – our technology investments enable us to deliver quality services at compelling prices

Economical Service

Datastore's scan service and storage fees are economically structured to provide you with a high-quality solution while meeting your budgetary initiatives.

Convenient Access

Datastore's service fleet and customer service agents stand ready to provide you with access to your business records and files on demand. Cost-efficient delivery schedules and after-hours emergency service are available to all Datastore customers.

Respected Experience and Reputation

In a disaster, the longer it takes a company to recover electronic data the less chance their business has to survive.

93% of companies that lost their data center for 10 days or more, due to a disaster, filed for bankruptcy within one year of the disaster. 50% of businesses that found themselves without data management for this same time period filed for bankruptcy immediately. (National Archives & Records Administration in Washington)

Companies that aren't able to resume operations within ten days (of a disaster hit) are not likely to survive. (Strategic Research Institute)

Don't let your company validate these statistics; call Datastore today for a complimentary business
